

# Connect Four

## Basic Rules:

1. Make sure you have the graphics window in view! This is a visual game.
2. Add pieces by inputting a column. The computer will then add its own piece in a strategic manner. Watch yourself, or you could lose!
3. Whoever makes it to four in a row, any orientation, wins.

## Suggestions:

1. Go for the middle. Taking the center of the board is key to winning.
2. Try not to make senseless or quick moves.
3. There's no offense like a good defense.
